# DEFENDER EVENTFLOOR

## THE INDUSTRY & EVENT STANDARD

### DEFENDER EVENTFLOOR

Our DEFENDER EVENTFLOOR is composed of individual floor tiles measuring 50 cm x 50 cm x 2.9 cm. Each tile in turn has 2 cable ducts crossing each other in a 90° angle that are individually accessible and closable.

The floor tiles are securely connected to one another via an interlocking dovetail system. End strips with rounded edges provide a smooth transition from the underlying flooring to the DEFENDER EVENTFLOOR.

Once the EVENTFLOOR is in place, users benefit from being able to lay cable from above at any time with little effort. Cable with a diameter of up to 22 mm can be laid in the floor tiles.

The tiles are made of tear- and pressure-resistant polyurethane. The construction design also permits the support of loads of over 6 tons per tile. The DEFENDER EVENTFLOOR is thus capable of bearing all types of vehicle, from lifting trolleys to forklifts to low-bed trucks.

With an order quantity of 150 m<sup>2</sup> or more, the colour of the DEFENDER EVENTFLOOR can be freely selected from a large range of colours. (Possible additional costs according to agreement.)

The lids of our DEFENDER EVENTFLOOR are also available in different colour combinations. The ultimate show-stopper: The lids can be made of a transparent material, and the use of light tubes can then transform the cable flooring into an effects floor. The effects achievable via a simple control system are then limited only by the imagination.

The flexible individual tiles can compensate for slight irregularities in the underlying flooring. Due to its flexibility, when the eventfloor is in place, it can thus adapt to the underlying surface.

Because of its construction, the DEFENDER EVENTFLOOR also has insulating properties, and thus provides outstanding protection against cold. Our flooring is therefore also suitable for use e.g. in ice rinks, for events on the ice surface.

### THE BENEFITS AT A GLANCE:

- Weight for an area of 100 m<sup>2</sup>: approx. 1.6 tons
- Easy assembly and dismantling (with no tools required)
- 4 cable ducts per tile, each with a diameter of 22 mm
- Ducts are accessible from above, permitting convenient laying of cables after the event floor is in place
- Provides insulation against cold and moisture
- Complies with CE low-voltage guidelines
- The system overcomes height discrepancies resulting from different materials
- Underlying flooring is not damaged
- Highly resistant to pressure and tearing
- Customisable colouring in a wide range of colours
- Can be combined with light to create an effects floor
- Resilient and sound- and vibration-absorbing flooring
- Easy to clean

### AREAS OF APPLICATION

- Machine flooring for job safety
- Operational flooring in front of a workbench
- Effects and cable flooring at trade fairs
- Basement flooring for home workshops
- Protective flooring for catering
- Insulation on ice surfaces
- Stage flooring etc.
